

1. In a home entertainment system that includes a central device, a display device and a recording system, a method for operating the recording system to record a signal, the method comprising the steps for:

connecting a central device directly to a display device and to a recording system, such that any signal that reaches the recording system must be transmitted from the central device to the recording system;

storing an electronic programming guide at the central device;

transmitting programming information included in the electronic programming guide from the central device to the recording system;

transmitting a signal carrying programming from the central device to the recording system;

recording the programming information at the recording system; and recording the signal at the recording system.

- 2. A method as recited in claim 1, further comprising the steps for: connecting an electronics device directly to the central device; and prior to the step for transmitting the signal from the central device, transmitting the signal from the electronics device to the central device.
- 3. A method as recited in claim 1, wherein the central device is an Internet terminal.

- 4. A method as recited in claim 1, further comprising the step for receiving, at the central device, the signal from a source of programming prior to the step for transmitting the signal from the central device.
- 5. A method as recited in claim 1, wherein the step for recording the programming information further includes the step for recording information relevant to the programming carried by the signal in an index on a recording medium, wherein the information relevant to the programming includes the location of the recorded programming on the recording medium and information obtained from the electronic programming guide.
- 6. A method as recited in claim 5, wherein the title of the programming and the frame number are recorded in one of the vertical blanking interval or the overscan area of the signal.

THE REPORT OF THE PROPERTY OF THE PERSON OF

7. In a home entertainment system including a recording system, a central device connected to the recording system, and a programming source, a method of recording a program carried by a signal, the method comprising the steps for:

storing an electronic programming guide at the central device;

recording, at the recording system, programming information included in the electronic programming guide;

locating, at the recording system, space on a recording medium for recording the program; and

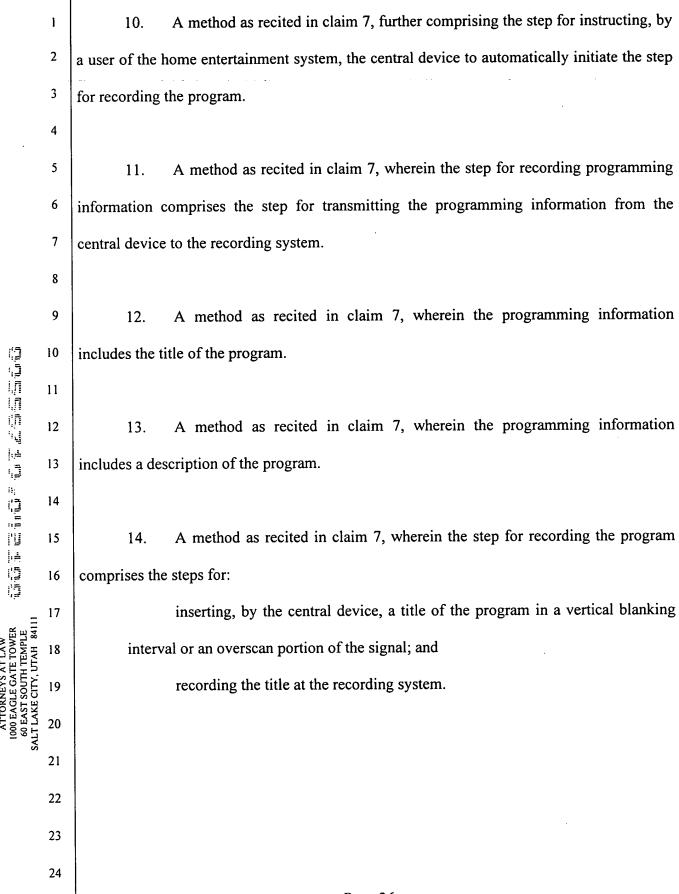

recording the program on the recording medium, wherein the programming information references the program.

8. A method as recited in claim 7, wherein the step for locating space includes the steps for:

determining from the space on the recording medium whether enough free space is available for recording the entire program; and

going to a location on the recording medium upon which the recording of the program will begin.

9. A method as recited in claim 8, wherein the step for locating space is performed automatically.

|--|------|
| plurality of electronic consumer devices, a computer program product for implement | ng a |
| method for managing the recording of audio and/or video signals in the entertain   | ment |
| system, the computer program product comprising:                                   |      |

a computer-readable medium carrying executable instructions for performing the method, wherein the method includes the steps for:

storing an electronic program guide at a central device;

receiving input from a user for recording programming on a specific channel;

transmitting programming information included in the electronic program guide from the central device to a recording system;

recording the programming at the recording system on a recording medium; and

indexing, on the recording medium, programming recorded on the recording medium, wherein the indexing includes programming information from the electronic program guide and the location on the recording medium where the programming was recorded.

23. A computer program product as recited in claim 22, wherein the input received is transmitted from a user through a remote control device.
